Problem Statement :

Archaeologists need a centralized platform to log and share details of historical sites they visit globally. This project provides an interactive world map where users can pin visited locations and add public notes, fostering collaboration and public engagement with historical discoveries.

MUMBAI HACKS

Describe your solution

1. Location Detection:

Uses GPS or search input to identify the archeological site.

2. Generative AI for Descriptions:

Expands on database info to create detailed, engaging narratives.

3. Image Generation:

Creates visuals of the current site and AI-powered reconstructions.

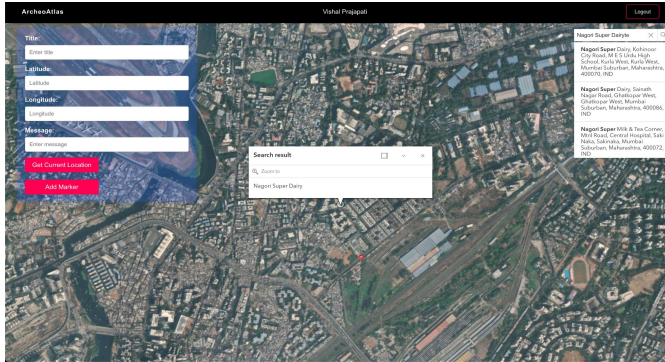

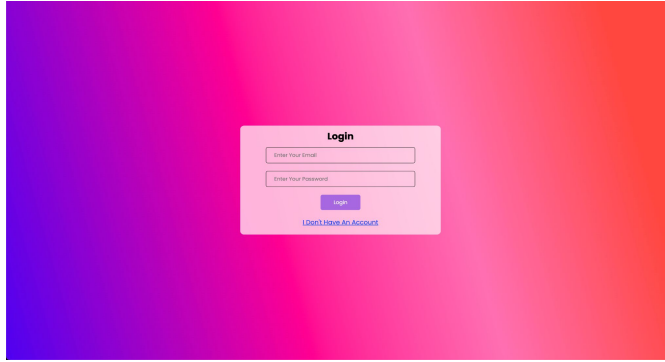

4. Interactive Features:

Offers immersive descriptions, visual walkthroughs, and educational insights.

5. Public Sharing:

Enables sharing of all data, visuals, and AI content to educate and engage the public on cultural heritage.
